DETAILED ACTION

1. Applicant's election with traverse of Group VI, claim 16, in the reply filed on 5/21/10 is acknowledged. The traversal is on the ground(s) that the search of Group VI will likely reveal art relevant to the examination of the elements of Groups V and VII, also drawn to claim 16 only. This argument is persuasive so the restriction requirement is modified so that Groups V through VII are combined into a single group for claim 16, and claim 16 will now be examined for its full scope wherein said parkin binding polypeptide is selected from synaptotagmin I, synaptotagmin XI, or synapsin-like protein.

The requirement is still deemed proper and is therefore made FINAL.

- 2. Claims 1-15 and 17-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **with** traverse in the reply filed on 5/21/10.
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 16 refers to "synpasin-like protein" where it appears that --synapsin-like protein--, otherwise known as SLP, was intended.

Application/Control Number: 10/782,375 Page 3

Art Unit: 1649

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 16 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for synapsin-like protein that refers to a specific protein that can be identified by SEQ ID NO or other physical characteristics, does not reasonably provide enablement for any protein that is subjectively "like" synapsin. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. While there is a species of specific protein known in the art as "synapsin-like protein" or SLP, the specification does not provide adequate examples or guidance as to how a genus of other proteins that may be like synapsin would function in the claimed method without the artisan having to resort to undue experimentation to determine if the protein like synapsin possessed the necessary characteristics to be enabled in the instant method. In other words, the specification lacks a sufficient description of the structural features of SLP that make it enabled in the claimed method so that a genus of proteins could be also enabled in a routine predictable manner.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/782,375

Art Unit: 1649

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Page 4

6. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Koutnikova et al. (reference 1 of IDS filed 12/26/07). Koutnikova et al. disclose the protein PAP1 and its interaction with the parkin protein and its connection with Parkinson's disease (paragraphs [0001-0003 and 0009]. These same paragraphs also disclose a method of using PAP1 to screen for the rapeutic compounds, in addition to paragraphs [0011, 0018, and 0025]. Koutnikova et al. do not explicitly disclose using synaptotagmins as a substitute for PAP1. However, Koutnikova et al. do disclose that PAP1 protein shows a certain homology with various members of the synaptotagmin family (paragraphs [0010, 0176, and 0178-0179]. It would have been obvious to one of ordinary skill in the art at the time of the invention to try to substitute a synaptotagmin family member for PAP1 in a screening assay because PAP1, "which is related to the synaptotagmins, shows no significant homology with known proteins, and can be used in the rapeutic or diagnostic applications, for producing antibodies, probes or peptides, or for screening molecules" (paragraph [0178]). A substitution of one known element for a similar known element to provide the same function is generally regarded as at least obvious to try. See KSR Int'l Co. v. Teleflex Inc., 127 S. Ct. 1727 (U.S. 2007).

7. No claims are allowable.

8. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Stephen Gucker whose telephone number is 571-272-

0883. The examiner can normally be reached on Mondays through Fridays from 0930

to 1800.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

Page 5

supervisor, Jeffrey Stucker, can be reached at 571-272-0911. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private

PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
